

Pedestrian/Operative protection isn't an option, it's a must

BAAVA 1800VL: World-Leading Temporary Security Solutions

The BAAVA 1800VL barrier offers the shortest stopping distance for trucks of all European modular barriers in its class. At 50 km/h (under BSI-PAS68 conditions) the 18–19 tonne vehicle stopped at just 17.9 meters. This makes it the ideal solution for high-risk event security, ensuring maximum protection for both visitors and staff.

Rapid Deployment: A single person can set up a lane closure in under 10 minutes using basic hand tools.

Efficient Operation: The removable deployment lever allows one person to open the width barrier in seconds, making it perfect for immediate blue light or delivery access, in trafficked environments.

The BAAVA barrier is the ideal solution for securing pedestrian areas at events such as parades, military installations, sporting/municipal events, and entertainment zones.

Proven Security: Trusted at over 10,000 events worldwide, BAAVA barriers are renowned for their unrivalled strength, interoperability and reliability, making them the top choice for event security across Europe, the USA, and beyond.

Protection	18–19 tonne vehicle Rolling load up to 12 tonnes
Unit fixing	Yes, secured by bolting
Speed	50 to 60 Km/h
Mobility	Yes, with front and rear castors
Lockable	Yes, with demountable lever
Certification	IWA14 – PAS68 – ASTM (usa) Type N3/N3C
Stopping distance	17.9m
Manufacturing	Double welded steel unit

Pedestrian/Operative protection isn't an option, it's a must
